Before doors

October 14, 2026 - Annex Theatre. Chris directs; Vipin operates the app/video/polls; Nathan owns timing; Levi owns venue projection/audio/network. Final polish: October 13; one voting letter per answer, distinct vendor-chat report. Browser checks do not establish physical acceptance.

Crew hub: isaca-ai-vs-human.vercel.app/briefing.html

Complete all-six-film rehearsal - isolated revision oct13-final

Prepare one operating origin

1. Record final laptop, browser profile/version, exact show origin, selected opening/outro/full credits filenames and SHA-256 hashes. Prepare the backup machine independently.

2. Use extended displays: stage on projector, control on laptop. Same machine/profile/origin provides sync. Keep the provider and AI operator tabs off the audience display.

3. For a saved show: export results, Reset for doors, Apply October 14 plan. Votes/running clock block application. Media and custom AI replies remain. Previous provider settings are retained while Chris's Slido event is selected.

4. Load all six current films. Inspect Current/Custom/Outdated/Missing/Failed status. Explicit replacements retain prior media. A streamed review player does not install the show film.

5. Click projector once for sound; F for fullscreen. Test align/crop, rear-seat readability/QR, blackout, pause/restart and final manual GO. Control preview stays muted.

6. Warm the exact origin online, then reload and replay offline in both windows. Films remain local; Slido voting still needs connectivity.

7. Audit existing Slido #1549 939. Six opinion polls, one answer, exact A./B./C./D. order. Hide participant results, disable popularity sorting, read absolute host counts.

8. Test with two physical phones across all six polls. Export/reset only disposable tests; confirm LIVE/no rehearsal counts before doors.

Release checks to record

Slido owner-only capacity/sorting/access and two physical phones; selected external files with measured switching; continuous 105-minute run plus failure drill; actual projector/audio/network and named crew go/no-go. October 14 technical slot 14:30-16:00 is 90 minutes and cannot certify the full run.

Clock, cues and recovery

PACIFIC	SEGMENT / MANUAL GO
17:35-17:40	Opening GO starts clock; app black for external opener; return and GO to five rules cards.
17:40-18:40	Six ten-minute budgets. R1 title starts its clock; scorecards start R2-6 and retain start through title/film.
18:40-18:57	After R6 AI: Dom interrupts; R6 clock freezes. Silent 3-second Human+AI reveal, manual hold, then judges' discussion.
18:57-18:58	Dom introduces Kris. One-minute Futureproof invitation.
18:58-19:00	GO black. External outro and complete credits; return only after both finish.
19:00-19:20	GO Ask the Cyber Judges. Own full 20-minute clock; house lights.

Chris/Nathan measure selected closing plus switching. If over two minutes, reduce the earlier discussion by the measured excess; retain the full Q&A. Every film/animation/black hold waits for manual GO.

Scoring and voting

Rounds 1-5: Human then AI, four face-down judge votes, GO reveal. 3-1/4-0 win one point; 2-2 or matching choices draw. Five bare Cyber Judges Debate holds. Back before judging rewinds the score. Scorecards precede titles 2-6 only.

Round 6: one poll, Human then AI, no judge-entry/debate, point or automatic draw. Export includes all six audience/AI decisions and labels round 6 **Unscored closing discussion** with blank judges.

The app owns the 45-second vote clock. Vipin opens matching Slido poll at voting GO, closes it manually at expiry, enters absolute counts by letter, resolves top tie with host, then GO Human and GO AI. Never infer counts from rounded percentages or sorted row position.

Controls and failures

Space / right arrow / Page Down: GO. Left arrow / Page Up: Back. O: controls. F: projector fullscreen. B / period: blackout. T: restart timer. Shift+A-D: human tie override. 1-4: judges. Focused Space/Enter operates its button; verify clicker focus.

Failed film: Retry, then deliberate Skip / Use full briefing and read complete facts/host script. Lost provider/network: announce manual A-D room tally and enter real counts. Never substitute rehearsal samples. Lost window: restore same origin/profile, cue/media/sound owner. Backup machine has independent state.

Slido and the phone drill

Existing event: #1549 939. Participant: qr.sli.do/gGusjgjLaYNhUMtNicY6fL. All six polls audited October13; dates October11-15 cover show night. Chris confirms owner-only capacity/sorting/Vipin access; physical-phone acceptance remains open. No duplicate event or new purchase.

1. Scan projected QR on two physical phones, from rear seating. Both enter the same event.

2. Each poll: both phones choose B; verify B=2, others=0. Enter by letter and reveal Human then AI manually.

3. Disposable test: split A/B and verify tie; change vote before close and verify counts update.

4. Close provider poll; verify late vote rejection and no premature participant results.

5. Export tests, reset only disposable responses/session, confirm LIVE before doors. Never reset real audience responses.

Scenario 4: give the room time

94 seconds; no chat for first 5. Arrivals: 5 / 24 / 39 / 53 / 70 / 83 seconds. Reading includes timestamp/sender at two words/second, minimum eight seconds, then five suspense seconds before next. At 10:49 access remains under review; the 11:13 unconfirmed threat-intelligence report is retained. Final viewport holds 10:49 / 10:50 / 11:13 for Vipin's manual GO.

Full v3 host-read chat is in production-drafts/scenario-04/fallback.md. Emergency script/deck retains all incident facts. Existing spoken fallback describes the full canonical incident; it is not a newly narrated v3 chat.

Prepared AI: source and confidence

ROUND	PROVIDER / DECISION	CONFIDENCE
1	ChatGPT / B	95%
2	Claude / C	75%
3	Grok / D	70%
4	Claude / B	70%
5	ChatGPT / C	97%
6	Grok / C - unscored	68%

Chris's October 12 edited three-bullet stage reasoning/conclusion differs from the preserved full October 10 supplied replies in operator view. Inspect custom overrides. Facility 87% and incident 94% are scenario facts, not contestant confidence. App transitions and reveals are silent; preserve film audio.

Pinned films and acceptance

Round 1 - 61.300 seconds

What the candidate supplies

Six cleaned 1080p masters, six 720p backups, complete optional SRT/VTT and posters. Films 1/2/3/5/6 preserve exact approved AAC packets and decoded PCM. Film 3 retains the same woman at 18-20 seconds and clear uncertainty rows around 26 seconds. Film 4 preserves its approved 94-second audio and captions unchanged. Previous masters and edit sources remain.

What the crew must sign off

Chris/Kris: creative and exact opening/outro/full-credit selection. Chris/Vipin: owner-only Slido settings, Vipin host access and physical-phone test. Nathan/Vipin: measured closing/switching and continuous 105-minute rehearsal plus failure drill. Levi/Vipin: actual projector/audio/network, rear-seat reading/QR, source switching and house-light cues. Record go/no-go under issue #4232 before doors.

After show: export results before reset. Keep release identity, chosen filenames/hashes, origin/profile, operator timestamp and any announced manual fallbacks. Retain the verified rollback package; do not delete approved masters or reproduction sources.
